

FIRE DANGER -- Adel Station

Maximum, Average, and 97th Percentile, based on 21 years data

Fire Danger Area:

- Adel Station
- Area 9
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

- EXTREME** -- Use extreme caution
- High** -- Watch for change
- Moderate** -- Lower Potential, but always be aware

Maximum -- Highest Burning Index by day for 2003 - 2023

Average -- shows peak fire season over 21 years (7190 observations)

97th Percentile -- 3% of the 7190 days from 2003 - 2023 had an Burning Index above 102

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:

20' Wind Speed over 15 mph, RH less than 30%, Temperature over 90, Keetch-Byram Drought Index over 550

Years to Remember: 2007 2011

Fuel Model: D - Southern Rough

Remember what Fire Danger tells you:

- ✓ Burning Index gives day-to-day fluctuations calculated from temperature, humidity, wind, daily temperature & rh ranges, and precip duration.
- ✓ Wind is part of BI calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

- *Green fuels are very volatile and burn readily
- *Some fuels are ready to burn within <1 hour after a rainfall
- *Sandy soils found here require 4-wheel drive vehicles

*Problematic fire behaviors is likely where ERC > 65, BI >85 Dispersion Index >70, Mixing Height > 5000'

Responsible Agency: GFC
